

TIM BI

software engineer

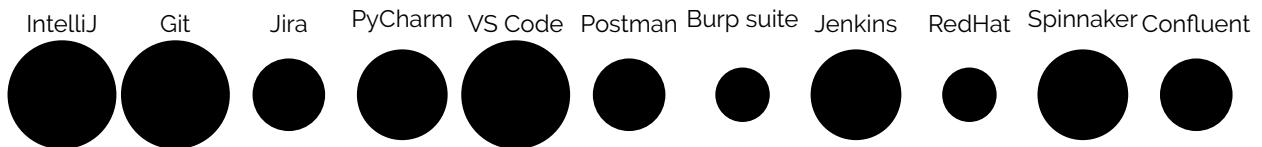

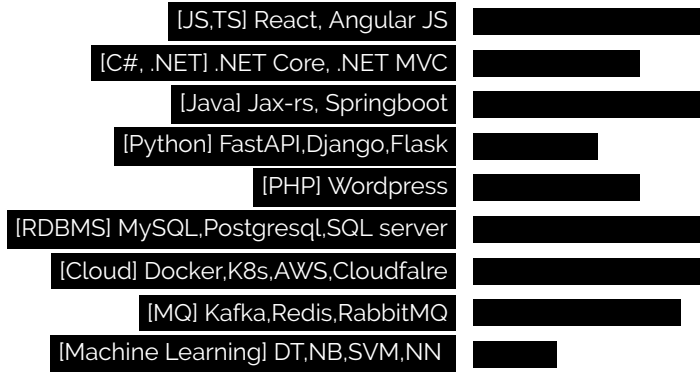

WHO AM I?

I began my tech journey at age 15, contributing to commercial software projects throughout high school and university. To showcase my technical capability, see my 3D portfolio (top right of this page).

As a diligent software engineer who combine hands-on development experience with strong attention to detail, continuous learning, and effective communication within Agile-Scrum teams. Beyond technical strengths, my experience working in the banking industry gives me valuable insight into financial business processes, operational structures, and enterprise-grade system expectations.

I am currently seeking a junior or intermediate software engineering role where I can grow my skills and contribute to a high-performing team.

EXPERIENCE

2/2025 – Now
Fulltime Permanent
Wellington + hybrid

Graduate Software Developer

Bank of New Zealand

Develop and maintain backend services providing customer tax, contact, and address information for upstream applications, also build solutions to sync the latest data back to the host. Support both modern and legacy systems, including message queues and database integrations.

- Work in a fully agile team, collaborating with business analysts and product owners to refine requirements, create epics, and plan delivery with developers and testers.
- Investigate complex issues involving legacy technologies such as mainframes, analyse the problems, and propose design solutions. Break work into epics and backlog items for delivery.
- Build new services using Spring Boot, Kafka, PostgreSQL, and Kubernetes, ensuring compliance with internal API standards. Maintain and upgrade services as standards and requirements evolve.
- Configure our services into the CI/CD pipelines to simplify the workflow after each code commit.
- Monitor production through Splunk dashboards and alerts, triage incidents, and provide timely fixes to restore service stability.
- Collaborate with numerous internal technology teams to integrate their APIs and accelerate delivery of domain services.
- Patch servers, upgrade dependencies, and enhance existing applications to meet BNZ's security and compliance standards or some new regulations (e.g., CPS234).
- Produce clear documentation for investigations, system behaviour, and domain knowledge to support team decision-making.
- Help other people when they have issues in the repositories with which i have worked or the tech issues that I have been through.

Springboot / K8s / AngularJS / SQL Server / ReactJS / Salesforce /
Jenkins / Spinnaker / NexusIQ / AWS / Kafka / PostgreSQL

6/2023
Virtual Micro-internship
Auckland & Remote

APP developer

Danone

One month internship program introduced by Auckland university. This involved developing a web app, which aims to enhance productivity by digitizing shop floor paperwork.

- Solely developed the frontend (HTML, CSS, JS) and backend RESTful APIs (Python, Flask) for the project.

Flask[python] / JS / HTML / CSS

11/2019 – 04/2023
Full-time
Zhuhai & Remote

Full Stack Software Engineer

Vertical Information Technology Ltd.

After a few months of onboarding and training, I joined the core development team and quickly became the key contributor for two major systems: a smart Warehouse Management System (WMS) and an Asset Management System (AMS). Working in a fast-paced Agile team using Scrum methodology, I learned how to collaborate effectively and deliver high-quality results.

Key achievements and responsibilities:

- Integrated RFID tags and scanners to extend WMS/AMS functionalities for real-time asset tracking.
- Conducted secondary development and customization on scanner SaaS platforms to fit internal workflows.
- Offloaded static file storage and serving by integrating AWS Lambda and S3 to separate file handling from the core backend.

.NET MVC / Mysql / Redis / AWS / Gitlab / Jenkins / React JS / Kafka

EDUCATION

New Zealand

Bachelor of Science

Major in Computer Science

University of Auckland

Bethlehem College

LANGUAGES

Mandarin-Chinese
English

HOBBIES

I have a passion for playing the piano and keyboards, not only as a personal hobby but also professionally on stage for commercial events. I love exploring newly released technologies on GitHub, engaging in the creation of small-scale projects. Additionally, I enjoy hiking with friends and exploring the city in my leisure time.
